GRG Polydynamics – Website Content, Certifications & NPD Details

Subject: GRG Polydynamics – Website Content, Certifications & NPD Details

Sir,

As discussed today, please find below the details and supporting information required for the GRG Polydynamics website development.

The following certification copies have been shared for website inclusion:

- IATF 16949 Certificate
- ISO 14001:2015 Certificate
- SQ Mark Certificate
- ESG Certificate

These certifications highlight GRG Polydynamics' commitment towards:

- Automotive-grade manufacturing standards
- Quality management systems
- Environmental responsibility
- Supplier quality excellence
- Sustainable and ethical manufacturing practices

Additionally, please include the following compliance statement on the website:

"No child labour is employed at GRG Polydynamics Private Limited."

NPD (New Product Development) Activities

GRG Polydynamics has a dedicated NPD team supporting complete product development and production readiness activities.

The following NPD capabilities should be highlighted on the website:

- Customer requirement review and feasibility study
- Product design evaluation and DFM (Design for Manufacturability) analysis
- Tooling concept development and tool design approval
- Mold manufacturing and qualification
- Material selection and validation
- Process parameter development and optimization
- Sample production and dimensional verification
- PPAP, APQP, FMEA, Control Plan, and quality documentation
- Customer approval and production readiness review
- Mass production launch and continuous improvement

Core Manufacturing Capabilities

The website should prominently showcase the following capabilities:

Plastic Injection Molding

- Precision injection molded components
- Automotive and industrial applications
- High-volume manufacturing
- Process optimization and quality control

Metal Casting

- Industrial metal casting solutions
- Engineering-grade components
- Custom manufacturing support
- Precision production capability

Tooling Transfer Support

- Mold transfer and validation
- Preventive maintenance (PM)
- PREP assessment and process stabilization
- Production transition support
- Trial validation and optimization

Website Positioning

The website should position GRG Polydynamics as:

“A process-driven, automotive-grade engineering and manufacturing company specializing in precision plastic injection molding, metal casting, tooling transfer, and new product development solutions.”

The overall design and content tone should be:

- Technical
- Industrial premium
- Engineering-focused
- Process-oriented
- Automotive manufacturing standard

Media & Content Required for Website

Photos

- Factory infrastructure
- Injection molding machines
- Metal casting process
- Tool room
- Quality inspection
- Team and operations
- Product closeups
- Certifications

Videos

- Factory walkthrough
- Machine operation
- NPD activities
- Tooling process
- Quality control process
- Founder introduction
- Production workflow

Regards,

GRG Polydynamics Private Limited
